

Energy Efficiency Measures in Public Buildings at Municipality Level

Project Financing

WBIF Grant	WB7-KOS-ENE-09	€ 2,500,000
KFW Loan		€ 2,500,000
KFW External Grant	Grant	€ 2,500,000
WBIF Grant	WB4-KOS-ENE-05	€ 600,000
Total		€ 8,100,000
Total Grants		€ 3,100,000
Total Loans		€ 2,500,000

Project Description

In Kosovo, heating of facilities comprise around 70 % of the overall thermal energy consumption. This project focuses on the improvement of heating, lighting and thermal insulation in municipal public buildings. It will help reduce Kosovo energy expenditure and improve living standards, particularly in schools and health centres.

The WBIF has provided grant support for the preparation of the feasibility study as well as to support the implementation of selected energy efficiency measures. The latter are currently ongoing in four municipalities.

Results and Benefits

- the municipalities will benefit from the accomplishment of local and international policy objectives, namely reductions in energy expenditure and an improved standard of living
- will save energy for heating and would decrease consumers' spending and expenses and increase comfort levels in public buildings (mainly schools and health centres)
- the percentage of coal and mazut used will decrease as will pollution levels, which will have a direct impact on the environment and on the health of the community
